PROFESSIONAL SUMMARY

Junior Security Operations Center (SOC) Analyst with hands-on experience in security monitoring, threat detection engineering, incident investigation, and network operations across enterprise lab and production environments. Holds a B.Sc. in Cybersecurity and the Google Cybersecurity Professional Certificate, with practical expertise in Wazuh SIEM/XDR, Sysmon telemetry, Windows security event logging, Linux, Python, SQL, and the MITRE ATT&CK framework. Experienced in building enterprise SOC labs, authoring custom XML detection rules for ransomware behavior (MITRE T1490), conducting IOC analysis, and maintaining high service availability for VoIP and ISP network infrastructure under strict SLAs.

TECHNICAL SKILLS & FRAMEWORKS

Security Operations:	Security Monitoring, Incident Triage & Response, Threat Hunting, Log Analysis, Detection Engineering, IOC Analysis, Security Event Investigation
Security & SIEM Tools:	Wazuh SIEM/XDR, Sysmon , Wireshark, Windows Event Viewer, Kali Linux, VMware, Git, GitHub
Networking & Protocols:	TCP/IP, DNS, DHCP, HTTP/HTTPS, FTTH, GPON, VoIP, SIP , Routing & Switching, Network Troubleshooting
Operating Systems:	Windows 10/11, Linux (Ubuntu, Kali Linux), System Administration
Programming & Scripting:	Python, SQL, Bash, Linux CLI, XML (Wazuh Detection Rules)
Security Frameworks:	MITRE ATT&CK , NIST CSF, Cyber Kill Chain, CIA Triad

SECURITY & DETECTION ENGINEERING PROJECTS

Enterprise SOC Detection Lab — Threat Detection & Detection Engineering

Hands-on Lab Environment

Environment: Wazuh SIEM/XDR • Sysmon • Windows 10 • Kali Linux • VMware • MITRE ATT&CK

- Telemetry & SIEM Integration:** Deployed Wazuh SIEM/XDR integrated with Sysmon endpoint telemetry to collect detailed Windows security events including process creation, command-line activity, registry edits, and file modifications.
- Ransomware Attack Chain Simulation:** Simulated a complete ransomware attack from a Kali Linux adversary host covering Reconnaissance (T1595), User Execution (T1204.002), Privilege Escalation (T1134), Credential Dumping (T1003), and Shadow Copy Deletion (T1490).
- Gap Analysis & Custom Rule Engineering:** Identified that default Wazuh rules only generated low-severity alerts for ransomware preparation techniques. Engineered **3 custom XML detection rules** mapped to MITRE ATT&CK T1490 to catch malicious vssadmin, bcdedit, and wadmin commands, escalating alert severity to **Level 12 (Critical)**.
- IOC Investigation & Incident Reporting:** Analyzed attack telemetry, extracted Indicators of Compromise (IOCs), correlated cross-host attack events, and authored a formal incident report detailing attack timelines, MITRE mappings, containment recommendations, and detection improvements.

SME-Guard — AI-Powered Cybersecurity Awareness Platform

Developer Project

Environment: React JS • Firebase • Python • Generative AI

- Developed secure user authentication and Role-Based Access Control (RBAC) using Firebase Authentication.
- Designed interactive cybersecurity awareness modules covering phishing, ransomware, password security, social engineering, and email security.
- Integrated Generative AI to deliver personalized, adaptive cybersecurity training and awareness content for small businesses.

PROFESSIONAL EXPERIENCE

Ratel Plus Nigeria Ltd. — Network Operations Center (NOC) Support Engineer

Kano, Nigeria | 2026 – Present

- Monitor and support enterprise Voice over IP (VoIP) infrastructure to ensure high service availability and performance under strict SLAs.
- Investigate VoIP service degradation, call quality issues, SIP registration failures, and network connectivity problems.
- Perform first-level incident investigation, troubleshooting, and escalation following established operational procedures.
- Monitor network devices, service health, and operational alerts to identify and resolve performance degradation proactively.
- Document incidents, troubleshooting activities, root cause analysis (RCA), and resolution steps to support continuous service improvement.

BrowsePoint Telecommunications & ISP — Network Operations Center (NOC) Intern

Kano, Nigeria | Nov 2024 – May 2025

- Monitored FTTH (Fiber-to-the-Home) and wireless radio network infrastructure within a 24/7 ISP Network Operations Center.
- Investigated fiber outages, wireless link degradation, customer connectivity issues, and network anomalies using operational monitoring tools.
- Performed first-level incident investigation and escalated high-priority network incidents to senior engineers per SLA procedures.
- Assisted in troubleshooting GPON, FTTH, and wireless backhaul connectivity issues to maintain network uptime.

Startbench Limited — IT & Systems Assistant

Kano, Nigeria | 2023 – 2024

- Assisted with software deployment, endpoint configuration, Windows system administration, hardware troubleshooting, and system testing.

Sab Ventures Computer Services — IT Support Assistant

Kano, Nigeria | 2017 – 2021

- Installed, configured, and maintained Windows workstations, network peripherals, and software applications for end users.

EDUCATION

Bayero University Kano
B.Sc. in Cybersecurity (2021 – 2026)

Citadel Center for Learning Computer
Computer Science Program (2018 – 2019)

CERTIFICATIONS & TRAINING

Google Cybersecurity Professional Certificate
Google / Coursera

Cisco Networking Academy
Ethical Hacker • Introduction to Cybersecurity • Networking Basics
